PRESENTS

What Does SARS-CoV-2 Evolution Mean for the Future of the Pandemic?

TUESDAY, JANUARY 12, 2021 • 4–5 PM

[CLICK HERE TO REGISTER FOR ZOOM MEETING.](#)

John Dennehy is a professor of biology at Queens College of the City University of New York. Dennehy's laboratory researches virus evolution, ecology, population dynamics, and the emergence of viruses in new host populations. Currently, the laboratory's main focus is two-fold: modeling the persistence and spread of SARS-CoV-2 in the built environment and monitoring SARS-CoV-2 genetic diversity in NYC wastewater. Dennehy earned a PhD at Clark University and was a postdoctoral fellow at Yale University and the State University of New York at Albany in 2007. He has received more than \$2.5 million in grant funding for virus research and

has published over 50 articles, book chapters, and conference papers on virus evolutionary biology and ecology. He is also a senior editor for *Microbiology Resource Announcements*, an associate editor for *Virus Evolution*, and a curator for the American Society of Microbiology's COVID-19 Research Registry.
